Vitamin D replacement during pregnancy may be beneficial not only at birth, but also later on.

Effect of Vitamin D Replacement on Maternal and Neonatal Outcomes

Low vitamin D in pregnant women is very common in the Middle East. This study will determine the benefits of vitamin D supplementation during pregnancy on newborn and maternal health.

WHAT ARE THE BENEFITS OF PARTICIPATING?

- Check your vitamin D levels.
- Check your baby’s vitamin D levels and bone mineral density.
- Get your baby’s picture.
- No costs, all tests will be done free of charge.
- Your test results will be provided to your obstetrician for future reference.

AM I ELIGIBLE TO PARTICIPATE IN THE STUDY?

YES

if you are:
Healthy Pregnant Women
More than 18 years of age
Delivering at AUB-MC or Rafic Hariri University Hospital (RHUH) or Bahman Hospital.

If you would like to participate or have any question concerning the study please contact Dr. Myriam Chlela
